

**NOCITA AUTHORIZATION FORM**

Nocita® (bupivacaine liposome injectable suspension) is a long-acting local anesthetic that provides up to 72 hours of postoperative pain relief.

Nocita® is made of bupivacaine local anesthesia that is encapsulated into multivesicular liposomes and released over time.

The pain control provided by Nocita® is significant and can lead to a marked improvement in post surgical comfort and recovery. Nocita® is labeled for single-dose infiltration into the surgical site to provide local postoperative analgesia in dogs and as a nerve block in cats for declaw procedures.

Because of the importance of pain control, Nocita® may be used in other types of surgeries when it is deemed safe to do so. In these cases the use will be off label. Your signature below indicates your consent for Synergy Mobile Veterinary Surgery to use Nocita® at the time of surgery to augment your pet's post-operative pain control and you understand that in select instances it may be used off label when deemed necessary by the surgeon. There is no increase in cost Nocita® is utilized.
